Dear Valued Customer

Policy for Retesting Products Having Reached the Recommended Retest Date

Lubrizol generally warrants that its products will meet its published specifications when the products are released for shipment to its customers. Lubrizol products are generally stable when stored under the recommended conditions shown on the accompanying product data sheets/handling instructions.

Lubrizol products do not have stated expiry dates or "shelf-lives".

All products have a Recommended Retest Date (RRD), which is determined during development through controlled stability studies and other predictive methods. The duration between a product's manufacture date and its RRD is set during commercialization and will vary depending on the product.

RRD is defined as the date after which Lubrizol recommends retesting the certificate of analysis (COA) characteristics of the product to ensure it continues to meet specifications. The recommendation to retest product inventory is not an implication of expiry, and the RRD is not an expiry date. The decision to retest and/or use product that has aged beyond the RRD is solely that of the owner of the product.

Lubrizol may occasionally provide testing services for samples from customer owned product at the discretion of Lubrizol's sales account manager.

Lubrizol will not:

- Warrant or otherwise certify customer owned inventory, including after the RRD is reached.
- Update or otherwise modify the RRD for customer owned inventory.
- Re-issue COA's with extended RRD for customer owned inventory.

Regards
